History and Design of the SCL-90-R

Leonard R. Derogatis, PhD

Brief History of the SCL-90-R / BSI

Personal Data Sheet (1918)
Cornell Medical Index (1948)
Hopkins Symptom Checklist (1968)
SCL-90-R (1975)
Brief Symptom Inventory (BSI) (1975)
BSI-18 (2000)

**Dimension Definition**

**Somatization**

Somatization:
Reflects distress arising from perceptions of bodily dysfunction. Complaints focus on cardiovascular, gastrointestinal, respiratory, neurological and other systems with strong autonomic mediation. Pain and discomfort of the gross musculature and other somatic equivalents of anxiety are also possible components of Somatization.

**Dimension Definition**

**Obsessive-Compulsive**

Obsessive-Compulsive:
This measure focuses on thoughts, impulses and actions that are experienced as irresistible and unremitting and that are of an ego-alien or unwanted nature. Behavior and experiences reflecting a more general cognitive performance deficit also contribute to this measure.

**Dimension Definition**

**Interpersonal Sensitivity**

Interpersonal Sensitivity:
The Interpersonal Sensitivity measure focuses on feelings of inadequacy and inferiority, particularly in comparison to other people. Self-deprecation, self-doubt and marked discomfort during interpersonal interactions are characteristic manifestations of this syndrome. Self-consciousness and negative expectations about interpersonal relations are hallmark features of I-S.
**Dimension Definition**  
**Depression**

Depression:  
The Depression dimension reflects a representative range of the manifestations of clinical depression. It comprises symptoms of dysphoric mood and affect, signs of withdrawal of life interest, lack of motivation and loss of vital energy. Feelings of hopelessness, thoughts of suicide and other cognitive and somatic correlates of clinical depression are included in this measure.

**Dimension Definition**  
**Anxiety**

Anxiety:  
General signs of anxiety such as nervousness, tension and trembling are included in the domain definition, as are feelings of apprehension, dread, terror and panic. In addition, some somatic manifestations of anxiety are also reflected in the domain.

**Dimension Definition**  
**Hostility**

Hostility:  
The symptoms of the Hostility dimension include thoughts, feelings, and actions that are characteristic of the negative affect state of anger. Items reflect all three modalities of expression, and demonstrate qualities such as resentment, irritability, aggression and rage.
Dimension Definition
Phobic Anxiety

Phobic Anxiety:
The Phobic Anxiety dimension defines the syndrome as a persistent fear response to a specific person, place, object or situation, which is disproportionate to any actual threat, and leads to avoidance or escape behavior. Items overlap highly with DSM-IV Agoraphobia syndrome.

Dimension Definition
Paranoid Ideation

Paranoid Ideation:
The Paranoid Ideation dimension represents paranoid behavior as fundamentally a disordered mode of thinking. The Items comprising P-I reflect the cardinal clinical features of projective thought, hostility, grandiosity, suspiciousness, centrality, and fear of loss of autonomy.

Dimension Definition
Psychoticism

Psychoticism:
Psychoticism was designed to represent the construct as a continuous dimension, from a withdrawn isolated lifestyle at one pole to demonstrable psychotic behavior at the other. The measure attempts to reflect a graduated continuum from mild social alienation to first-rank symptoms of psychosis.
**Importance of Norms**

- Essential for Standardized Reporting
- Greatly facilitate interpretation and communication
- Greatly facilitate the evaluation of clinical change
- Enable within-profile as well as between-profile comparisons
- Enable comparisons across gender or age through specifically-keyed norm groups.

**Norms via Area T-Scores**

- Area T-scores represent standardized normalizing transformations that reflect the area (proportion) under the normal curve associated with that score.
- This enables the assignment of an accurate percentile equivalent score which facilitates interpretation both within and across profiles.
- The use of a standardized score like the area-T enables the development of gender-keyed norms and the possibility of meaningful comparisons between men and women.

**Normative Samples for the Checklist Series**

- Community population norms - SCL-90R, BSI, BSI-18
- Psychiatric Outpatient norms - SCL-90R, BSI
- Psychiatric Inpatient norms – SCL-90R, BSI
- Adolescent non-patient norms – SCL-90R, BSI
- Oncology Patient norm - BSI-18
SCL-90-R Configural Items

• #19  Poor appetite
• #44  Trouble falling asleep
• #59  Thoughts of death or dying
• #60  Overeating
• #64  Awakening in the early morning
• #66  Sleep that is restless or disturbed
• #89  Feelings of guilt

Tri-Level Interpretive Model

• Global Score(s): Provide summary information on overall respondent distress level in a single numerical value.
• Dimension Score(s): Provide information on specific areas of psychological distress and deliver a relative profile of the respondent’s current distress experience.
• Item Score(s): Provide details concerning the specific manifest symptoms that are currently distressing the respondent.
SCL-90-R® Mean Psychological Profiles for 137 Men with Erectile Disorder and 110 Women with Orgasmic Disorder

Rates of Depressive Symptoms* in a Sample of 137 Males with Erectile Disorder

Four Subtypes of Anorgasmia
Generic Caseness Criterion for the SCL-90-R

- Community population: T=60, 16%
- Psychiatric population: T=63, 10%
- False Negatives: T=60
- False Positives: T=70

Common Comorbidities and The SCL-90-R

Model for Relationship Between Anxiety, Depression & Somatization

- Anxiety & Depression
- Precipitation
- Maintenance
- Amplification
- Somatization
Depression, Anxiety and Somatization Syndrome Overlap in Primary Care

SCL-90-R Somatization Score
T-Value of ≥ 69 Predicts:
- Distressed high utilizers of health care
- High comorbidity with Mood (86%) & Anxiety Disorders (43%) lifetime prevalence
- 5-fold ↑ in Dx of panic disorder 9 years post eval. for chest pain
- High psychiatric morbidity in Environmental Illness pts. Ie, Somatoform, Anxiety & Dep.

Bornschein, S. et.al, Psychosomatic Med. 2006

SCL-90-R Predictive Validity
Validation of the SCL-90-R via the Present State Examination (PSE)

Diabetic sample n=102
Case finding w ROC (PSE)
AUC = .90
Sensitivity = 88%
Specificity = 86%

Logistic Regression w/GSI
Sensitivity = 72%
Specificity = 87%
Subscale Convergence
12 of 14 subscale matches

Bulimic sample n=71
Case Finding vs PSE
AUC = .90
Sensitivity = 76%
Specificity = 92%

Logistic Regression w GSI
Sensitivity = 77%
Specificity = 91%
Subscale Convergence
11 of 14 subscale matches

Routine Outcome Monitoring: Outpatient Group versus a Reference Group in Dutch Population

Schulte-van Maaren, et. al. 2012
Scoring the SCL-90-R, BSI, & BSI 18

- Q Local™ or Q-global™ Scoring & Reporting
  - Remote administration (New on Q-global!)
  - On-screen report viewing / pdf output
  - Progress Reports to track patient results over time

- Mail-in Scoring Services
- Hand-Scoring Materials

Reporting

- Profile Report (SCL-90-R, BSI & BSI 18)
  - Presents a graphic profile of raw and normalized T scores for each of the nine symptom scales and three global indices
  - Useful for monitoring change over time if patient is continually assessed

- Interpretive Report (SCL-90-R and BSI only)
  - Graphic profile
  - Narrative overview of symptoms
  - Pathognomonic Signs
  - Symptoms of Note

- Progress Report (Q Local)
Reporting
• Interpretive Report (SCL-90-R and BSI)
  Graphical profile with narrative addressing symptom overview, Pathognomic Signs & Symptoms of Note

Reporting
• Progress Report (SCL-90-R, BSI & BSI 18)
  Track progress over time

More information / Ordering
• Sample Reports can be found on the Pearson Clinical website

• To Order
  – 800-627-7271 (7 AM – 6 PM Central Time)
  – www.pearsonclinical.com

• Webinar Special Offer!
  – 10% off one order
  – Use Effort Code i38
  – Valid until October 17th, 2014
